

# OIL QRDC

Jean-Luc Béchenne – LS2N

v1.0 – September 2018

The OIL standard defines standard attributes but allows implementation-specific attributes. The latter are suffixed by a †.

---

## OS object attributes

---

### STATUS

Set the error processing level of services. See the OSEK QRDC. Possible values are:

STANDARD	does not check object ids, caller identity and state, alarm bounds and resources ownership.
EXTENDED	check all possible errors.

### STARTUPHOOK

Switch the call to the startup hook in StartOS.

<div>FALSE</div>	the startup hook is not called
TRUE	the startup hook is called
